US Citizen | yusufgdeveloper@gmail.com | 630-974-7009 | LinkedIn | GitHub | Portfolio

Software engineer specialized in full-stack development, cloud infrastructure, and payment systems integration.

Experienced with React, Node.js, Java and AWS. Seeking backend and cloud software engineering roles.

Education

University of Illinois at Chicago (Honors College) – B.S. in Computer Science(SWE Conc.) Expected: May 2026

Dean's List | GPA: 3.61

Chicago, Illinois

Coursework: Data Structures & Algorithms, Cloud Engineering, DB Design, Agentic AI, Systems Programming

Technical Skills

Languages: C++, Java, Python, TypeScript, JavaScript, GoLang, SQL, C, Scala

Frameworks & Libraries: React, Node.js, Spring Boot, Flutter, LangChain, PyTorch, JUnit, Jest, Appium

Tools & Platforms: Git, Docker, Kubernetes, AWS (RDS, EC2, EKS), Azure, Terraform, Linux, Jira

Methodologies: CI/CD, DevOps, REST APIs, Agile/Scrum, Test Automation

Experience

Software Engineering Intern, Donatefy

May 2025 – August 2025

Schaumburg, Illinois

- Reduced hardware costs by 73% by building a cross-platform React Native Tap-to-Pay application enabling nonprofits to accept mobile donations while supporting over 10,000+ monthly transactions
- Reduced AWS RDS overhead by 43% by migrating redundant financial data storage to Stripe as the system of record, retaining full reporting access via on-demand API parsing and formatting
- Automated releases to 50+ client devices by architecting a version control and deployment pipeline using scheduled webhooks to detect and push AWS-hosted updates reducing manual deployment time by ~2 hours

Software Engineer, Americloud Tech – Chicago, Illinois

Feb 2024 – May 2025

Promoted from Intern to software engineer after 2 months

(Intern: Dec 2023 – Feb 2024)

- Processed over \$1M in transactions by developing and maintaining Flutter, React, and Node.js
- Automated donor data and financial reporting across 75,000+ transactions by implementing real-time REST APIs integrating Blackbaud and Salesforce, eliminating manual data entry workflows
- Eliminated payment flow failures across multiple production applications by resolving Stripe Tap-to-Pay integration defects in an open-source Flutter package with 5,000+ downloads
- Increased donation conversion by 28% by implementing client-side caching for product and asset API calls in React/Flutter, eliminating redundant network requests on repeat views
- Cut internal turnaround time by 83% by building and containerizing a Docker-based admin portal aggregating mobile survey submissions via webhook ingestion replacing manual exportation of data.

Software Engineering Intern, UIS Consulting

May 2023 – August 2023

Chicago, Illinois

- Maintained 99% uptime across 50+ restaurant clients by engineering a cloud-based POS and food ordering platform integrated with Kitchen Display Systems for real-time order routing and queue management
- Eliminated ~4 hours of manual deployment overhead per client by delivering an embeddable JavaScript widget enabling online ordering integration without subdomain provisioning

Projects

GraphRAG Knowledge Graph Pipeline

Aug 2025 – Dec 2025

Scala, Apache Flink, Neo4j, Akka HTTP, Docker, AWS EKS, LangChain

- Built an end-to-end GraphRAG pipeline ingesting 800+ research papers via Flink stream processing into a Neo4j knowledge graph, deployed as containerized REST microservices on AWS EKS
- Implemented APIs for natural-language querying, evidence retrieval, and graph neighborhood exploration, achieving sub-200ms query latency across the full corpus without rechunking datasets
